

2010 NEW AHS MINI SIZE

In March 2010, The American Hosta Society president Tom Micheletti formed an ad hoc committee to clarify the size of mini hostas for the society. This was necessary to create uniformity in mini size specifications for AHS Hosta Show classification, AHS Popularity Poll, Mini Forum and other activities. Members were Judy Burns, Hosta Show Classification chair; Bob Olson, Journal editor; W. George Schmid, AHS Nomenclature chair; and Bob Solberg, American Hosta Growers Association liaison.

The new AHS mini size is: leaf blade area no greater than about 6 square inches. (Area is leaf blade length multiplied by leaf blade width.) This accommodates the mini size criterion used in the AHS Hosta Show classification, namely, leaf blade area <6 sq. in.

Note that “about” precedes “6 sq. inches.” Further, *H.* ‘Blue Mouse Ears’ will be the “biological standard” for mini hostas. This hosta was selected because many members grow ‘Blue Mouse Ears’ and know how big it gets and consider it a mini.

The new mini size requirement permits a larger selection of hostas to be candidates for the AHS Miniature Popularity Poll, to be published annually in *The Hosta Journal*, compared to previous AHS mini criterion of no greater than about 4.0 sq. in.

The 2010 AHS Mini Hosta Criteria:

- ▶ Leaf blade area no greater than about 6 square inches (38.7 square cm.). [Change]
- ▶ No restriction on clump spread. [No change]

This site will continue to develop two lists, with the intent of keeping them up to date. Donald A. Rawson, Comstock Park, Michigan, will principally be responsible for this function.

One list will comprise registered and species minis satisfying the new AHS size requirement. It can serve as a convenient reference source for the AHS Miniature Popularity Poll. The other list will comprise unregistered minis meeting the new AHS size requirement.

Note that for both lists the leaf blade criterion is "<6 sq. in." This permits the AHS Registered Mini List to be used both for the AHS Hosta Show classification, which has a "<6 sq. in" criterion, and for the AHS Miniature Popularity Poll, which has an "about 6 sq. in." limit.

**W. George Schmid, Chair, AHS Nomenclature Committee
Warren I. Pollock, Member, AHS Nomenclature Committee**

Definitions for Terminology:

- **Leaf blade area is defined as maximum leaf blade length multiplied by maximum leaf blade width.**
- **Leaf blade length does not include length of petiole (leaf stem).**
- **Preferably, several measurements should be taken on several of the largest, typically representative leaves and then averaged.**
- **Measurements are to be made on mature plants. As a general rule, mature is defined as at least 5 years of good growth from liner or plug size. (These are the small plants wholesaled by tissue-culture [TC] laboratories.)**
- **About is prefixed to the size criterion to give a bit of "wobble room." Highly precise measurements are not required and likely impractical. Of prime importance is good practical judgment in selecting which representative leaves to measure, in making measurements and in analyzing the dimensional measurements.**
- **AHS Mini Hosta Criteria apply to both species and cultivars, both registered and unregistered varieties.**
- **"Miniature," "Mini" and "mini hostas" are the preferred terms. Hosta size designations "tiny" and "dwarf" remain discontinued.**
